When landing becomes a pleasure...

The MYW868B/C is a RF microprocessor based yacht remote control system specially designed for yacht engines, bow thrusters and anchor windlass controlling. The high quality switches, keys and relays together with a special software protocol enable high reliability yacht controlling. The transmitter is built in an ergonomic and waterproof casing which enables simple management and bearing.

products

Wireless yacht control system

A Slovenian manufacturer that specialises in CCTV video surveillance equipment is targeting the marine industry with a range of products to aid boat owners docking in marinas or anchoring.

Astel has launched a wireless yacht control system, the MYW868B/C. The RF microprocessor-based remote control system is designed for controlling marine engines, bow thrusters and anchor windlasses. With the use of the remote control device, MYW868C, the skipper has control over his vessel from any spot on the yacht. Switches and keys are used to control both engines, the bow and the stern thrusters, as well as the anchor windlass during anchoring.

The remote control unit, MYW868C, is encased in a watertight housing. Thanks to the carrying cord provided, it can even be worn around the neck, thus freeing the hands for other tasks during docking. The steering of the vessel is always at the

skipper's fingertips in case any correction of the vessel's movement is required.

During anchoring, complete control of the vessel is possible from the bow, which allows the skipper to precisely determine the position of the anchor and avoid any underwater obstacles. During the weighing of the anchor, proper manoeuvring of the vessel is possible right from its bow, thus avoiding any overloads on the anchor windlass and possible entanglement with another anchor.

The device comes in three versions: Version MYW868B/C-3 controls the vessel's engines and anchor windlass; version MYW868B/C-4 controls the vessel's engines, anchor windlass and bow thruster; and version MYW868B/C-5, in addition to engine and bow thruster control, also features stern thruster control.

An additional remote control unit, MYW868BE, can also be supplied for secondary engine controls if the yacht is fitted with a flybridge.

The photo shows the complete system with receiver and transmitter with wall-mount bracket. In the system kit (MYW868B/C) are also the antenna, two batteries CR2, strap and complete resistor adapters for all types of yacht electronic command connection.

Oil bath hubs

New Oil Bath Hubs now replace the old-fashioned hand-greased hub and bearing lubrication system on most EZ Loader boat trailer models. The Oil Bath Hub features a quick-view oil level indicator and convenient plug for adding additional oil. Enter 304 into Enquiry Service at www.ibinews.com/enquiry

New digital generator control

Mastervolt has introduced the new Whisper Digital Diesel Control, that will be supplied as standard with all of the company's latest Whisper generator sets. Features include automatic starting and stopping combined with monitoring functions.

volt/amps/frequency/load and operating hour's readout. Enter 302 into Enquiry Service at www.ibinews.com/enquiry

Lewmar blocks

Lewmar has produced what it claims is the biggest roller bearing webbing block of its kind for Grand Prix racing boats. The block dwarfs the typical webbing block used on most racing boats, and has a safe working load of 12.5 tonnes. The block uses alloy cheeks and sheaves and features torlon rollers. The weight of the block is a mere 4.1kg. Enter 303 into Enquiry Service at www.ibinews.com/enquiry
